

# **FIELD ENGINEER**

**Reporting line:** KSA Operations Manager  
**Direct reports:** None  
**Location:** Kingdom of Saudi Arabia

## **Interface and team work with:**

**Field Engineer Team**

**Clients and service companies**

**Sales and operations team in Middle East and North Africa**

**Engineering team for equipment design, service or maintenance Norwich, Technical Manager**

## **Job Brief:**

As part of the Field Engineer Team your core role will be operating the company's service provision both offshore and onshore to a high standard. Operations are ad-hoc and often at short notice, and so flexibility in this regard is a key attribute. When not on operations, there is a requirement to perform a number of duties both in the office and at other locations as outlined below. For every two days of work, one day of leave is accrued and can then be taken as preferred once approval has been given.

Specific training on EV's existing product lines will be provided as required, and further training will be provided as future product lines are released. The successful candidate will have the opportunity to be at the forefront of class leading, innovative products. They will be expected to exceed client expectations regarding service quality and assist other members of the team in achieving this goal.

## **Role and Responsibilities:**

- Abiding by and maintaining adherence to Company Quality, Health, Safety and Environmental policies and procedures at all times.
- Offshore and Onshore operation of Company's service provision, including the Kingdom of Saudi Arabia, UAE, Oman, India and others in the Middle East Region.
- Attendance of SIT or FAT as required at Company or client nominated site.
- Attendance of meetings with clients and service companies as required
- Equipment preparation & maintenance pre/post equipment mobilization/demobilization. Completing & uploading required documentation to OMS.
- Scheduled maintenance (Preventative Maintenance) of equipment inventory, completing & uploading the required documentation to OMS.
- Reporting equipment failures. When achievable; make the necessary steps to investigate & repair fault(s) via; MENA Maintenance Lead/Line Manager/Ops Manager/EVTC instruction.
- Company workshop-based tasks in the support of onshore or offshore operations.
- Preparation of required documentation including but not limited to manifests, delivery notes, operating procedures, risk assessments, operational reports and service reports.
- Pre-job meeting with client and post-job wash-up meetings, solely or accompanied depending on grade, including HAZOP or equivalent.
- Recommending and getting approval for new or revised operating procedures and/or equipment improvements or Products.

- Behaving in a professional, courteous and suitable manner at all times.
- Abiding by and adhering to the Company's Code of Business Conduct.

## **Experience required**

- Knowledge of well completions, cased hole wireline operations or coiled tubing operations; minimum three years Field Engineer experience
- Demonstrated capability to lead operations at the wellsite, adhering to procedure or STEP BACK 5x5 (or similar) of the operation in a professional manner
